

INSTRUCTION SHEET

for: **Part No. 2BA 959 932-5xx / 2165-CS**

APPLICATION AND
MOUNTING INSTRUCTIONS

110mm ROUND LED REAR DIRECTION INDICATOR LAMP
Multivolt 9-33V DC

Features

- Ultra long service life
- Ultra fast response time
- Reverse polarity protected
- Fully sealed against dust and water (IP6K6 / IP6K7)
- Compensates for voltage drop on long vehicles
- Low power consumption
- Withstands most vibration and mechanical shock applications
- Manufactured from high impact acrylic to withstand high impact forces

Lens Marking and Installation Requirements

This lamp module, identified by lens marking **E24** 0023 and the **HELLA** logo was manufactured to comply with ECE Regulation 6 Category 2a for Rear Direction Indicator Lamps.

- A tolerance of +/-3° applies on all mounting details.
- Lamp module mounting surface must be vertical to the ground.
- Lamp module reference axis must be parallel to the vehicle longitudinal axis.
- Lamp module is approved to be mounted only with lens engraving "TOP" located correctly.
- Lamp module must be visible from 45° inboard and 80° outboard, as well as from 15° above and below the horizontal axis.
- At least two lamp modules are required.
- Lamps modules must not be mounted less than 350 mm and more than 1500 mm above the ground, two additional lamps can be mounted at a vertical distance no less than 600 mm from the mandatory lamps.
- Lamp modules must be mounted within 400 mm of the widest point of the vehicle and no closer than 600 mm together.

Please refer to ECE Regulation 48, for further details.

959 150-94 V04

Hella New Zealand

Type / Typbezeichnung: **2BA 959 932-AA**

1 / 2

Belongs to approval no: **E24 0023**

Gehört zur Gen.-Nr.:

Mounting instruction no:

Einbauanweisung Nr.:

Direction Indicator of cat. 2a for automobile

Fahrlichtungsanzeiger der Kat. 2a für Kraftfahrzeuge

Function: Funktion:	Light source: Leuchtquelle:	Design voltage: Foltsspannung:	Nominal voltage: Nennspannung:	Nominal power: Nennleistung:
Direction Indicator Fahrlichtungsanzeiger	16 LEDs	13.5 / 28.0V	9 - 33V	3.0W

- ✕ = Centre of reference in accordance with the ECE-regulation-no. 6.
Bezugspunkt nach der ECE-Regelung Nr. 6.
- ✕ = Centre of reference for the definition for illuminating surface in accordance with the Council Directive 76/756EEC or ECE-regulation-No. 48 (see Annex A).
Bezugspunkt zur Bestimmung der Grenzen der leuchtenden Fläche nach 76/756 EEC oder ECE Regelung-Nr.48. Markierung s. auf der Abschluss-Scheibe. Maße s. Anlage A.
- ✕ = Axis of reference: Parallel to the car center line and parallel to the road.
Bezugsachse: Parallel zur Fahrzeuglängsachse und parallel zur Fahrbahn.

The Direction Indicator has 16 LEDs in one string. If one LED fails than the whole string stops working.
Der Fahrlichtungsanzeiger beinhaltet 16 LEDs in Reihe geschaltet. Wenn eine LED ausfällt, fällt der gesamte Strang aus.

Lamp Mounting

- Lamp should be mounted on a flat surface to avoid mounting stress and as shown in the application and mounting instructions.
- Ensure that the engraving "TOP" is located in the correct position.
- After ascertaining the desired position on the vehicle, cut a hole to fit the lamp as shown in the diagram below. The lamp can then be used as a template to drill the screw/bolt mounting points.
- If passing the cables through a hole, ensure there are no sharp edges to cut or chafe the cable.
- Connect the lamp as per the wiring chart shown below, preferably join the cable inside a sealed cable junction box.
- Push the screws caps on securely until flush with the lamp surface.

General Dimensions (mm)

Wiring Colour Coding

This lamp is multivolt capable allowing full light output between 9 and 33 volts DC. LED lamps are polarity conscious. Reverse polarity will not damage this product but will inhibit its function. HELLA recommends wire connections be soldered, and heat shrink tubing applied to seal the joint.

Colour	Connect to	Power Consumption
White	Negative (-)	-
Yellow	Rear Direction Indicator (+)	3 watts
Blue	Rear Direction Indicator & HCS Pulse (+)	3 watts

NB: Lamp must be protected by a fuse rated at 5 amperes maximum.

Direction Indicator Lamps with HCS pulse work in conjunction with a failure detection system such as LED flasher units. If additional lamps are fitted beyond the amount supported by the failure detection system than they must be wired separately so as not to be detected.

Introduction

LED signal and marker lamps offer many advantages over conventional bulb lamps. Significantly reduced power consumption, ultra long life and high tolerance to shock and vibration make the LED lamps the ideal choice for the commercial transport industry, where the cost of ownership versus the initial purchase price of the product is well understood.

Compatibility to existing electrical systems

It is important for the installer to ascertain the compatibility of the low power consumption LED lamps with the electrical and/or electronic systems of the complete vehicle, including trailers. In most cases the reduced power consumption is beneficial by imposing less demands on the entire electrical system. For certain functions some electrical systems rely on a set power consumption for monitoring whether, for example, a trailer is connected.

Bulb failure monitoring for indicator lamps

The indicator bulb failure warning (if fitted to the vehicle) relies on the full load of a 21-watt bulb in most cases. Multivolt LED lamps with HCS pulse have integrated electronics for failure checking, if operating correctly the lamp will pulse a resistive load during the flasher "on" cycle to simulate this load. If the vehicle manufacturer does not guarantee indicator bulb failure control via the vehicle wiring system than HELLA can supply electronic control and flasher units which make it possible to convert the indicator failure system to suit Multivolt LED lamps with HCS pulse.

Electromagnetic Compatibility (EMC)

This LED lamp in an electronic device. The electrical circuits contain components that suppress possible interference, both emission as well as susceptibility, to the limits prescribed in UNECE Vehicle Regulation No. 10. To avoid false signals or interference, it is standard practice that sensitive instrumentation such as ABS and Tachometers etc. are provided with direct earths.

Protection against damage due to voltage spikes

This LED lamp is protected against damage from positive voltage spikes caused by events such as load dump conditions up to severity level 3 of ISO 7637-2 and contains a Transient Voltage Suppressor (TVS) designed to withstand a pulse of up to 5000 Watts. The lamp is protected against reverse polarity connection and negative voltage spikes of up to 1000 volts.

Electric Welding

Electric Welding may damage the LED lamps. For LED lamps, HELLA recommends the negative connection to be wired isolated from the vehicle chassis. If the lamp uses the chassis as the earth return it is recommended that this earth return is disconnected during electric welding.

FIT AND FORGET - BY DESIGN

Congratulations, the product you have selected comes from **HELLA** - a world leader in LED lighting design.

Following the launch of the first LED automotive signal lamps in 1990, **HELLA** Design and Innovation continues to set new standards. **HELLA** innovative solutions have been incorporated into millions of lamps, engineered and tested to the most stringent standards, to suit the most demanding environmental conditions.

The cornerstone to the success of our products is our no compromise **Fit and Forget - by Design** philosophy which is incorporated into every step of the product life cycle.

In a world consuming finite resources at an ever faster rate, **Fit and Forget - by Design** is the right environmental choice that also makes perfect economic sense to customers that consider the total life cycle Cost of Ownership.
