# SUPERIOR ILLUMINATION

**THE HUMAN HEART BEATS ONCE PER SECOND.  
HELLA INSTALLS ~ 5.7 BULBS IN THE SAME PERIOD OF TIME**

## Why HELLA Bulbs?

HELLA automotive bulbs are renowned for their uncompromising adherence to the highest quality and safety standards. There's a HELLA bulb to suit almost every requirement.

- Optimal light quality
- Uncompromisingly high testing standards
- Durable and robust products
- Lowest possible failure rate

## TS Pro Bulbs

TS Pro bulbs are a new generation of high-performance halogen bulbs specifically designed to cope with the heavy duty demands of 24 volt heavy commercial transport applications.

Utilising innovative single-coil filaments, TS Pro halogen bulbs offer significantly increased service life of up to 100% when compared to standard halogen bulbs. They also feature superior vibration resistance during extended periods of operation, leading to reduced vehicle servicing costs and downtime.

In addition to extended service life and improved durability, TS Pro halogen bulbs provide up to 100% increased illumination of the road ahead when compared to a standard halogen bulb. This results in improved vision and clearer visibility of objects and traffic situations in the distance ahead, effectively reducing eyestrain and driver fatigue, adding valuable seconds to driver reaction times for improved night driving safety.

## Replacement Bulbs

The New Zealand lighting rules state that all certified legal lamps (headlamps or tail lamps) must be fitted with an approved light source to remain legal, if the light source is replaced.

Most HELLA bulbs will be marked with an 'E mark' to show compliance. Some bulbs, to suit older vehicles or imports not originally destined for our market, may have different standards such as JIS (Japanese Industrial Standard). HELLA shows compliant bulbs under the category column in the bulb section.

## Safe for Modern Headlamps

All halogen bulb filaments produce UV radiation. If the glass casing of the bulb does not filter the UV radiation, it will be harmful to the polycarbonate lenses used on most of today's vehicles.

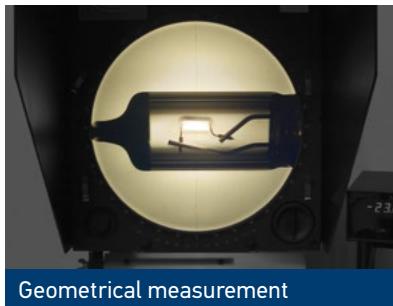

Excessive UV radiation from the halogen or HID bulb will result in discolouration and substantially diminished light transmission of the headlamp lens. All HELLA halogen and HID automotive bulbs are UV-reduced and are safe for use in modern headlamps with polycarbonate lenses.

**Note:** LED replacement bulbs are generally illegal for use in marker, signal and headlights as they do not comply with a lighting standard.

To avoid failing a Warrant/Certificate of Fitness inspection, all lighting equipment must comply with the law and meet approved standards.

## RIGOROUS TESTING GUARANTEES PREMIUM QUALITY

Geometrical measurement

A measuring projector is used to check the filament geometry - with regard to the statutory standards in accordance with IEC 60810. The filament must be dimensioned and positioned within the bulb as specified in the standard. This is the only way to achieve optimum headlight power and prevent glare to oncoming traffic.

Coating adhesion test

The adhesion of paint on coloured glass bulbs - such as the PY21W for example - is tested in a climate chamber at different temperatures and air humidities. Optimal adhesion of glass bulb paint guarantees the prescribed amber indicator light.

Vibration and shock test

Vibration resistance of the bulbs and the filament in particular is tested on an electro-dynamic vibration table.

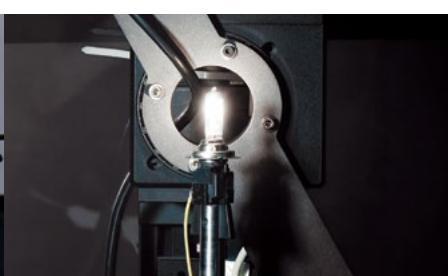

Service life test

Sophisticated tests are used to prove the high reliability of HELLA bulbs over a long period.

Luminous flux measurement

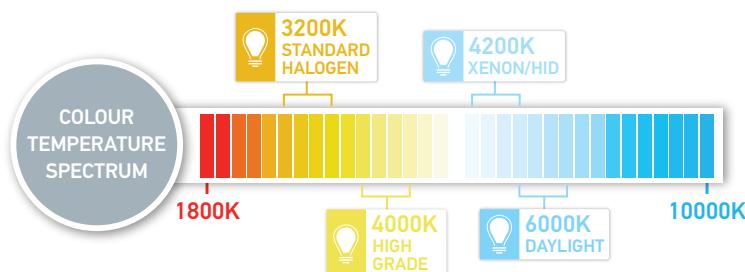

## COLOUR TEMPERATURE EXPLAINED

Colour temperature is a measurement in degrees Kelvin that indicates the hue of a specific type of light source. (Kelvin is indicated by the unit symbol K).

Colour temperatures over 4000K are called cool colours (blueish white), while lower colour temperatures (2700 – 3000K) are called warm colours (yellowish white through red).

The higher the temperature of a light source is, the greater the proportion of blue and the lower the proportion of red in the colour spectrum. An incandescent light bulb has a warm white colour temperature of approx. 2700K.

The illustration provides an indication of the colour temperature spectrum.

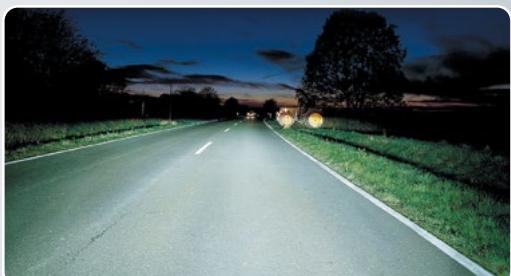

# XENON GAS DISCHARGE LAMPS

Xenon (HID) based front lighting systems are still among the best lighting systems available in terms of both quality and quantity.

- 01** Over twice the luminous flux\*  
(light quantity/light power)
- 02** Considerably longer service life
- 03** Light colour is closer to daylight
- 04** Significantly lower power consumption of only 35W  
(plus 7W for ballast)
- 05** Superior light performance  
(photometric efficiency)
- 06** Lower thermal load  
on the system

Illumination with good low beam

Illumination with Xenon low beam

\*Compared to standard Halogen bulbs.

The Xenon gas discharge, or high intensity discharge (HID) bulb illuminates via a light arc that is ignited between two electrodes. This technology requires a complex electronic ballast.

To optimise and maintain a safe lighting system, additional system features are often required e.g. headlamp cleaning systems, automatic headlight range adjustment and levelling systems for ECE type approved systems.

## Additional Regulations for Xenon Low Beam

In the ECE region, headlights with Xenon low beams may only be used in conjunction with automatic or dynamic headlight range adjustment and levelling system as well as a headlight cleaning system. This regulation takes into account the intense luminous performance of the Xenon bulb and is designed to ensure the safety of all road users.

## How They Work

A sophisticated ballast supplies the ignition voltage required to ignite the gas between two electrodes. This ignition voltage can be up to 30kV in 4th generation ballasts. Inside the bulb is a mixture of inert Xenon gas, metals and metal halides, which are ionised upon ignition resulting in a powerful light arc.

During the controlled supply of alternating current (at approx. 400Hz) the liquid and solid substances evaporate, due to high internal temperatures. The lamp only achieves its full brightness after a few seconds when all the components have been ionised. To prevent destruction of the lamp through uncontrolled increases in current, the current is limited by a ballast. Once the full light output has been reached, an operating voltage (not the ignition voltage) of only 85V is necessary to maintain the physical process. The luminous flux, light output, luminance and service life of Xenon HID bulbs significantly surpasses halogen bulbs.

**HID Ultra plus (UP) - Up to + 70% brighter**

Ultra Plus bulbs are the ideal bulbs for drivers looking to increase safety with more light on the road. This HID bulb produces up to 70% more light on the road, has a beam that is up to 20 metres longer than a standard bulb.

**Colour Match HID Bulbs**

As HID bulbs age, the colour temperature increases resulting in a whiter light. When an HID bulb is replaced with a new bulb it can look yellow compared to the original bulb, and will whiten with use. If a white light from installation is desired, a colour match bulb may be used (D2R-5K, D2S-5K) which will be a closer match to the older bulb from the first use. These bulbs are ECE compliant.

**Fault Diagnosis for HID bulbs**

Check whether the ballast is attempting to ignite the bulb after the light has been switched on. Ignition attempts can be heard clearly near the headlight.

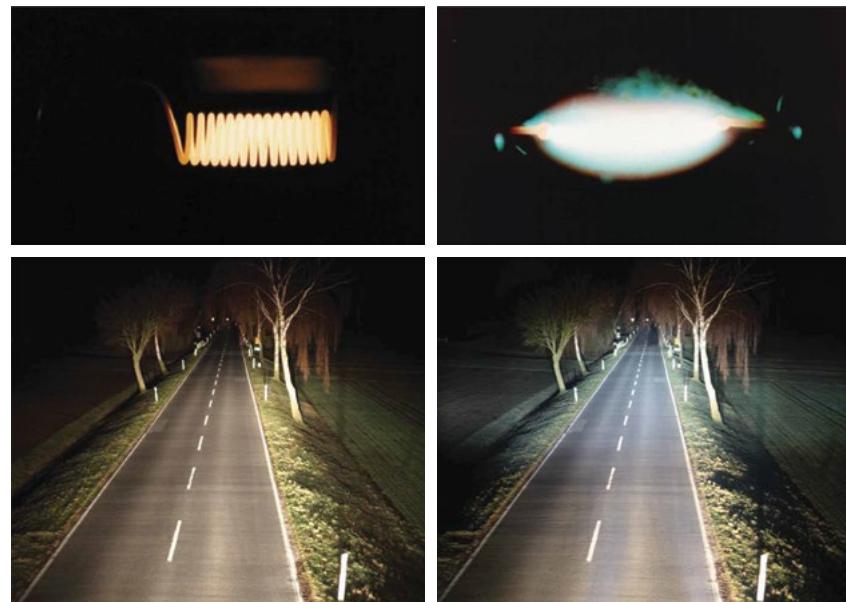

If ignition attempts are unsuccessful, the Xenon bulb should be checked by swapping it with one from the other headlight and the process tried again. If no ignition attempt is carried out, the fuse should be checked.

If the fuse is functional, check the voltage and ground supply directly at the ballast. Voltage must be at least 9V for 12V systems. If the voltage ground is verified and the Xenon bulbs are functional a faulty ballast is likely to be cause of the problem.

**Conversion kits (HID and LED)**

Converting an approved headlamp to another light source (e.g. Halogen to LED bulb) is not permitted, as the light sources are currently not compliant with New Zealand regulations. Therefore it is illegal to import, sell or fit these conversion bulbs to a vehicle that requires a WOF or COF.

Refer to [www.nzta.govt.nz](http://www.nzta.govt.nz) and search for the 'Get your Lights Right' Guide.

**Comparison between filament bulb (halogen) / light arc gas discharge lamp (Xenon)**

Typical light distribution and colour temperature of a light beam with standard halogen bulb.

Typical light distribution and colour temperature of a light beam with HID bulb.

	HALOGEN BULB (H1)	GAS DISCHARGE LAMP (XENON D1S)
<b>Light source:</b>	Filament	Light arc
<b>Luminance Flux:</b>	1550 lm	3200 lm
<b>Luminance:</b>	1450 cd/m <sup>2</sup>	3000 cd/m <sup>2</sup>
<b>Capacity:</b>	55W	35W
<b>Energy balance:</b>	8% light radiation 92% heat radiation	28% light radiation 58% heat radiation 14% UV radiation
<b>Service life:</b>	Approx. 500 hours	Approx. 2500 hours
<b>Vibration-proof:</b>	To a certain extent	Yes
<b>Ignition voltage:</b>	No	Yes 23000V (3rd generation)
<b>Electronic control:</b>	No	Yes
<b>Kelvin Temperature (Daylight ± 6000 K)</b>	3200 K	4150 K (Projection system)

<b>Tips for Dealing with HID Electronic Ballasts</b>	A faulty ballast leads to complete headlight failure. Possible causes for failure of the ballast are:	→ Lack of voltage/ sufficient current supply. → Lack of ground connection.	→ Faulty electronics of the device. → Internal short-circuits.

# QUICK REFERENCE UPGRADE BULB GUIDE

**Whiter**
**COOL BLUE (CB) AND BLUE VISION (BV) – WHITER (UP TO 4200°K)**

These bulbs come close to emulating the colour of a Xenon HID lamp. The high colour temperature of the Cool Blue bulbs creates the crisp white light which provides illumination that is conspicuous while being easy on the eye.

UPGRADE BULBS								
Bulb	Category	Part Number	Legacy Part Number	Compliance	Voltage	Power Consumption	Base	Page

**LONGLIFE (LL) - UP TO TWICE THE LIFE**

LongLife (LL) bulbs are increasing in popularity for applications such as taxis and drivers using headlamps during the day. Many new vehicles now come equipped with LongLife bulbs as a standard fitment. The bulbs will provide safe and legal light performance and can be rated at twice or greater the service life of standard bulbs.

UPGRADE BULBS

	H11	8GH 008 358-041	CG1255UP		12V	55W	PGJ19-2	284

Lifetime and performance gains are compared to standard versions of the bulb. Greater performance is measured between 50 and 75m in front of vehicle.

**ULTRA MAX (UM) - UP TO + 150% BRIGHTER**

**Plus  
150%**

Ultra Max bulbs are the ultimate upgrade bulb for drivers desiring the best performance from an approved bulb. This halogen bulb produces up to 150% more light on the road, and has a beam that is up to 40 metres longer and up to 20% whiter combining a highly engineered filament, pure xenon gas filling and innovative laser processing technology.

UPGRADE BULBS

**TS PRO - UP TO 2.5 TIMES THE LIFETIME AND 100% MORE LIGHT ON THE ROAD (HALOGEN BULBS).**

**TS Pro**

At night, truck drivers need the best possible light on the road ahead. TS Pro out-performs conventional 24V bulbs, allowing drivers to concentrate on the essentials. With their extremely long life and robust construction, these bulbs save on replacements and downtime, reducing fleet costs
