

SCANGRIP CHARGING PAD

Wireless charging pad designed for MAG PRO WIRELESS

Utilising the latest technology in battery charging, the intelligent SCANGRIP CHARGING PAD provides easy and fast automatic charging of the MAG PRO WIRELESS but also acts as a convenient storage space for the lamp in the workshop.

The charging pad is designed so that the lamp automatically “slides into place” over the powerful magnets on the back. Therefore, the ultra-thin charging pad with its compact design can be mounted almost anywhere and still hold the lamp. Mount it on the workbench, the wall or even under the ceiling, simply by removing the two screw caps and using two four-millimetre screws.

Intelligent object detection means that the charging pad can also be used for charging most mobile phones and other compatible devices.

The red LED informs about the status of the charging pad. It flashes 5 times when powering up and once every 10 seconds when on standby. While charging it is lit constantly and flashes quickly if an error is detected.

TECHNICAL SPECIFICATIONS

Charger input: 100-240 V AC 50-60 Hz 0.2 A
 Charger output: 5 V DC/ 1.0 A
 Power consumption: Max. 5 W
 Operating temperature: -10° to 40°C
 Dimensions: 183 x 84 x 13 mm
 IK07
 IP20
 Weight: 115 g
